

Vooner FloGard®

CORPORATE PROFILE

Founded in 1983, Vooner FloGard® Corporation is a privately held, North Carolina, USA corporation that designs, manufactures and markets conical ported, liquid ring single and two-stage vacuum pumps and compressors with a distinct difference: durable cast stainless steel components and bearings that can be changed while the pump remains installed. Performance ratings are vacuum pumps of 175 to 13,000 ACFM at 4-29" Hg. vacuum and compressors to 15 psig.

Our product line is marketed under the U.S. trademarks, VG® VTS™ and Vooner FloGard®. Every member of the Vooner organization is personally committed to producing pumps to our quality specifications, with on-time delivery.

We have shipped vacuum pumps and compressors to customers throughout the world. Customers in the power generation, pulp and paper, mining, textile finishing, dairy and food processing industries rely on Vooner pumps every hour of every day for a wide range of liquid removal, material recovery and pneumatic conveying.

Prior to shipment each Vooner pump undergoes a performance test (according to the specifications of the Heat Exchange Institute) and vibration analysis. Quality control inspection and performance test records are kept on file according to serial number and each pump is covered with a three-year warranty. Vooner maintains a complete inventory of pumps and replacement parts, ready for immediate shipment from our Charlotte, NC facility.

In addition to our commitment for supplying innovative vacuum pumps, Vooner has a mission to educate our customers about vacuum pumps and how they can be better used to optimize customers' processes. Vooner VacuTech™, our multi-day educational seminar, has been widely acclaimed by many pump user corporations. Furthermore, Vooner's Vacuum System Feasibility Studies and orifice tests show customers how to reduce system operating costs and improve production.

Vooner is supported by a network of long-term sales and service representatives throughout the world.

"Vooner FloGard Corporation was founded upon an innovative vision and we continue to be committed to innovation. Our number one objective is to offer long-term lowest cost pump performance by raising productivity and lowering the costs of using liquid ring vacuum pumps and compressors."

Charles H. Wunner, President
